# Division of Codes and Standards <br> Manufactured Home Electrical Load Worksheet Title 24. Housing and Urban Development Section 3280.811 <br> NOTE: 1 WATT = 1 VOLT-AMPERE 

DTN:
Existing Home Amps:
A. Lighting: Length of home times width of home (outside dimensions) = square foot, times 3 watts per square foot Length X Width x 3 watts
=
watts
B. Small Appliances: Enter number of $20-\mathrm{amp}$ small appliance (exclude laundry) circuits, times 1,500 Watts.

Number of circuits x 1,500 watts .. $=$ watts
C. Laundry: Include 1,500 watt minimum if installed........................................................... $=$ _ watts
D. Total (the sum of lines $A, B$ and $C$ ) . $=$ $\qquad$ watts
E. First 3,000 watts at $100 \%$ = $\qquad$ watts
F. $\qquad$ watts multiplied by 35\% (.35) $=$ ___watts
G. Net computed load (sum of line e and line f) $=$ $\qquad$ watts
H. $\frac{\text { (FROM LINE G) }}{}$ watts divided by 240 volts. $=$ $\qquad$ amps per leg

| LOADS IN AMPS - PART 1 |  | LEG A | LEG B |
| :---: | :---: | :---: | :---: |
| 1. Lighting \& small appliances (line H above) |  |  |  |
| 2. Bath fan 1 |  |  |  |
| 3. Bath fan 2 |  |  |  |
| 4. Range hood |  |  |  |
| 5. Freestanding electric range *** |  |  |  |
| 6. Electric furnace * |  |  |  |
| 7. Electric space heater |  |  |  |
| 8. Exhaust Fans |  |  |  |
| 9. Air conditioner* |  |  |  |
| 10. Gas furnace blower motor * |  |  |  |
| 11. Other |  |  |  |
| 12. Add $25 \%$ of the largest motor from line 6, 7, 8, 9 or 10 above |  |  |  |
| 13. | SUB-TOTAL |  |  |
| LOADS IN AMPS - PART 2 |  |  |  |
| 14. Disposal |  |  |  |
| 15. Electric water heater |  |  |  |
| 16. Dishwasher |  |  |  |
| 17. Electric wall mounted oven |  |  |  |
| 18. Electric cooktop |  |  |  |
| 19. Electric clothes dryer ** |  |  |  |
| 20. Other |  |  |  |
| 21. | SUB-TOTAL |  |  |
| 22. If 4 or more appliances are used in Part 2, use 75\% of line 21 |  |  |  |
| 23. TOTAL LOAD IN AMPS (combine Parts 1 \& 2) |  |  |  |

- $1 \mathrm{~kW}=1000$ watts; 1 volt ampere $=1$ watt; watts divided by volts $=$ amps
- Use nameplate ratings on fixtures/appliances for load values.
- Determine values for freestanding range based on name plate rating and table below. (A reduction is allowed)
- If de-amping an MH-unit, a permit from HCD is required. Use HCD 415 Application, include $\$ 196.00$ in fees, complete and attach this form and indicate on the HCD 415 what electrical loads will be reduced or eliminated to reduce the loads to the desired level.
- A 15 amp evaporative cooler circuit must be included in the calculations if the home is de-amped to 50 amps .
* Omit smaller of air conditioning and heating ampere load.
** If home is wired for electric dryer but the dryer is not installed, use 21 amp value.
*** Derive amps for free-standing range (as distinguished from separate oven and cooking units) by dividing values below by 240 volts.
FREESTANDING RANGE REDUCTION TABLE

| Nameplate Rating (in watts) | Use (in watts) |
| :--- | :--- |
| 10,000 or less | 80 Percent of rating |
| 10,001 to 12,500 | 8,000 |
| 12,501 to 13,500 | 8,400 |
| 13,501 to 14,500 | 8,800 |
| 14,501 to 15,500 | 9,200 |
| 15,501 to 16,500 | 9,600 |
| 16,501 to 17,500 | 10,000 |

# Division of Codes and Standards <br> Manufactured Home Electrical Load Worksheet Title 24. Housing and Urban Development Section 3280.811 <br> NOTE: 1 WATT = 1 VOLT-AMPERE 

## Example:

A $24 \times 60 \mathrm{MH}$-unit is equipped with the following equipment. Calculate all loads and "balance" the 120 v load.

Two small appliance circuits
Two bath fans: 1 rated $1.2 \mathrm{amp} / 120 \mathrm{v}, 1$ rated $1.7 \mathrm{amp} / 120 \mathrm{v}$
Freestanding electric range: $13.2 \mathrm{~kW} / 240 \mathrm{v}$
Electric Furnace: $10.5 \mathrm{~kW} / 240 \mathrm{v}$ (motor load 4.0 amp included)
Air conditioner: $24 \mathrm{amp} / 240 \mathrm{v}$ (motor load 8.0 amp included)
Electric water heater: Upper element 4500 watts/240 v; Lower element 4500 watts/240 v

One laundry circuit
Range hood: $1.9 \mathrm{amp} / 120 \mathrm{v}$
Disposal: $7.3 \mathrm{amp} / 120 \mathrm{v}$
Dishwasher: $8.7 \mathrm{amp} / 120 \mathrm{v}$
Dryer Circuit: $21 \mathrm{amp} / 240 \mathrm{v}$
A. Lighting: Length of home times width of home (outside dimensions) = square foot, times 3 watts per square foot

Length $60 \times 34 \times 3$ watts $\quad 24 . . . . .$.
$=$ watts
B. Small Appliances: Enter number of $20-\mathrm{amp}$ small appliance (exclude laundry) circuits, times 1,500 Watts.

C. Laundry: Include 1,500 watt minimum if installed............................................................... 1500 watts
D. Total (the sum of lines A, B and C):.................................................................................. 8820 watts

F. $\frac{8820}{(\text { FROMLINE D) }}$ minus $3,000=$ 5820 watts multiplied by $35 \%(.35) \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots$ watts
G. Net computed load (sum of line eand line f)........................................................................... =_ 5037 watts
H.
$\underline{5037}$ watts divided by 240 volts . $=\quad 20.9 \quad \mathrm{amps}$ per leg

| LOADS IN AMPS - PART 1 | LEG A | LEG B |
| :---: | :---: | :---: |
| 1. Lighting \& small appliances (line H above) (20.9 amps) | 20.9 | 20.9 |
| 2. Bath fan 1 ( 1.2 amps ) | 1.2 |  |
| 3. Bath fan 2 ( 1.7 amps ) |  | 1.7 |
| 4. Range hood (1.9 amps) | 1.9 |  |
| 5. Freestanding electric range ( 13.2 kW or 13,200 watts) | 35.0 | 35.0 |
| 6. Electric furnace ( 10.5 kW or 10,500 watts) | 43.7 | 43.7 |
| 7. Electric space heater (n/a) |  |  |
| 8. Exhaust Fans (n/a) |  |  |
| 9. Air conditioner (24.0 amps, Omit smaller load than furnace) |  |  |
| 10. Gas furnace blower motor ( $\mathrm{n} / \mathrm{a}$ ) |  |  |
| 11. Other ( $\mathrm{n} / \mathrm{a}$ ) |  |  |
| 12. Add $25 \%$ of the largest motor from line 6, 7, 8, 9 or 10 above | 2.0 | 2.0 |
| 13. | 104.7 | 103.3 |
| LOADS IN AMPS - PART 2 |  |  |
| 14. Disposal ( 7.3 amps ) | 7.3 |  |
| 15. Electric water heater (9000 watts, combine upper and lower elements) | 37.5 | 37.5 |
| 16. Dishwasher ( 8.7 amps ) |  | 8.7 |
| 17. Electric wall mounted oven ( $\mathrm{n} / \mathrm{a}$ ) |  |  |
| 18. Electric cooktop (n/a) |  |  |
| 19. Electric clothes dryer (21 amp circuit) | 21.0 | 21.0 |
| 20. Other (n/a) |  |  |
| 21. | (65.8) | (67.2) |
| 22. If 4 or more appliances are used in Part 2, use $75 \%$ of line 21 | $65.8 \times .75 \%=49.4$ | $67.2 \times .75=50.4$ |
| 23. TOTAL LOAD IN AMPS (combine Parts 1 \& 2) | 154.1 | 153.7 |

- All loads for this example must be converted to amps.
- Voltages for equipment in this example are 120 v or 240 v .
- The electric range load is 13.2 kW ( 13200 watts) using the freestanding electric range reduction table, a 13200 watt load reduces to 8400 watts. 8400 watts divided by 240 volts $=35 \mathrm{amps}$.
- If the home is equipped with air conditioning, omit the smaller of either the heating (gas or electric) load or the a/c load. In this example, the heating load is 43.8 amps and the $\mathrm{a} / \mathrm{c}$ load is 24 amps , hence the $\mathrm{a} / \mathrm{c}$ load is omitted from the calculations.
